TGD-Holstein Gordon Heron

Heron is a son of Gordon (a son of Taos from the same cow family as our long-running Glamour Red). The mother is a high-performing Einstein daughter who goes back to the legendary Regancrest Dellia EX 95 family via M-O-M Halo. Heron's inheritance profile is impressive with extremely high components and a high milk yield combined with excellent milkability. Longevity, cell count and fertility are at a high level and the calving traits are also rated very positively. In terms of conformation, we expect medium-sized offspring with good width and a lot of development potential, as well as very functional feet and legs. The udders are high and firmly attached and have a pronounced suspensory ligament. Heron inherits the sought-after casein variants A2/A2 and BB.
