Astana PP

ASTANA PP comes as a son of A2P2-PP from a very deep cow family with 12 generations EX and VG. Internationally successful bulls like Aristocrat and Arrow, like a large number of other sires, also come from this family and the dam Anastacia P VG 85 successfully participated in the German Dairy Show. The inheritance profile shows Astana PP as an excellent component sire and milking speed improver. The absolutely flawless conformation profile means that offspring with a lot of width from the chest to the pelvis, which is perfectly structured, can be expected. An open, wide rib and plenty of body depth provide plenty of capacity and high feed intake. The parallel rear legs are optimally angled, have high heels and ensure smooth movements. The high and wide attached udders have centrally attached teats with good teat length. The attractive profile is complemented by easy calving, excellent maternal calving ease and beta-casein A2/A2.
