Sakari PP

Sakari PP is one of the highest homozygous polled Star sons based on US pedigree and offers a slightly different sire succession for polled breeding on the maternal side. Sakari offers a very high production and an excellent longevity and also transmits good fitness values. Sakari transmits a functional conformation with not so much stature, sloping rumps, slightly angled hind legs and high attached udders, offering a balance in areas that are currently much sought after. Furthermore, Sakari can be used very well for heifer insemination and inherits beta-casein A2A2.
