WET Madman

MADMAN is a son of Faneca and comes from the Rud Zip/Robust Delicious cow family on his mother's side, which has produced countless successful insemination bulls. The different pedigree and the excellent inheritance profile make Madman doubly interesting. He impresses with very good milk production with positive components - a trademark of the mother's line. Very low somatic cell counts, beta-casein A2/A2 and consistently positive values in all fitness areas are impressive, as is the almost perfect linear profile. Wide, slightly sloping pelvises, slightly angled, completely parallel hind legs, a lot of dairy strength and very well attached udders with a strong central ligament mean that excellent freestall cows can be expected. Sire calving ease is average and the maternal calving process is rated very favorably.
